

Rodent Control Guide

Thank you for selecting Chem-Wise to provide comprehensive rodent control and rodent exclusion at your home or business. Your trained service technician will inspect your premises and provide you with a plan to eliminate any current rodent activity.

Rat and Mouse Control – Rats and Mice are nuisance pests. They can squeeze through holes as small as a ¼ inch making it difficult to find their entry point. Our services include placing bait stations and inspecting for potential entry points up to two inches in diameter. Chem-Wise uses a rodenticide that is very effective against rodents, however due to its mode of action, it will have a minimal effect if consumed by your pets. In any case we ask you to keep children and pets away from the materials used by our technicians.

Be Patient – Rodent control is a process that may take several weeks. Your initial treatment will consist of bait placements and inspections for possible entry points. Your services are guaranteed if you continue to experience any activity, please call our office to schedule a follow up service.

Pay Attention- Chem-Wise will always utilize the safest treatment methods; however, you must pay attention to pets and children to ensure they don't tamper with our product. Be aware of the location of all rodent control stations and keep children and pets away from the stations. Please call us immediately if you suspect they have gotten into or tampered with the bait. Chem-Wise will not be responsible for accidental rodenticide ingestion.

Utilize Integrated Pest Management

- Trim back trees and shrubs from the house
